        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PERIOD LENGTH OF CIRCADIAN AND ULTRADIAN RHYTHMS; AN INCREASE IN PERIOD LENGTH OF CIRCADIAN AND ULTRADIAN RHYTHMS; AN INCREASE IN PERIOD LENGTH OF CIRCADIAN AND ULTRADIAN RHYTHMS; AND A DECREASE LEADS TO LENGTHENED CIRCADIAN RHYTHMS. ASSEMITAL FOR THE CIRCADIAN RHYTHMS AND A DECREASE LEADS TO LENGTHENED CIRCADIAN RHYTHMS. ESSEMITAL FOR THE CIRCADIAN RHYTHMIC COMPONENT OF THE MALE COURTSHIP SONG THAT ORIGINATES IN RHYTHMIC COMPONENT OF THE MALE COURTSHIP SONG THAT ORIGINATES IN THE THORACIC MERVOUS SYSTEM. THE BIOLOGICAL CYCLE DEPENDS ON THE RHYTHMIC FORMATION AND NUCLEAR LOCALIZATION OF THE TIM. PER COMPLIANTIVELY REGULATES PER AND TIM TRANSCRIPTION THROUGH A NEGATIVE FEEDBACK LOOP. BEHAVES AS A NEGATIVE ELEMENT IN CIRCADIAN REGATIVE FEEDBACK LOOP. BEHAVES AS A NEGATIVE ELEMENT IN CIRCADIAN TRANSCRIPTIONAL INHIBITION (BY SIMILARITY).

1 NOISECT TRANSCRIPTIONAL INHIBITION (BY SIMILARITY).

1 FIRST ACCUMULATES IN THE PERINUCLEUS (BY SIMILARITY).

1 FIRST ACCUMULATES IN THE PERINUCLEAR REGION ABOUT ONE HOUR BEFORE TRANSLOCATION INTO THE NUCLEUS (BY SIMILARITY).

1 POMI: PHOSPHORULATED WITH A CIRCADIAN RHYTHMICITY, PROBABLY BY THE DOUBLE-TIME PROTEIN (DBT). PHOSPHORYLATED IN THE FORMATION OF HETERODIMER WITH THE FORMATION OF HETERODIMER PER TIME INTO THE MONOMER AND IN THE FORMATION OF HETERODIMER THE STABILITY OF PER MONOMER AND IN THE FORMATION OF HETERODIMER THE STABILITY OF PER MONOMER AND IN THE FORMATION OF HETERODIMER THE STABILITY OF PER MONOMER AND IN THE FORMATION OF HETERODIMER THE STABILITY OF PER MONOMER AND IN THE FORMATION OF HETERODIMER THE STABILITY OF PER MONOMER AND IN THE FORMATION OF HETERODIMER THE STABILITY OF PER MONOMER AND IN THE FORMATION OF HETERODIMER THE STABILITY OF PER MONOMER AND IN THE FORMATION OF HETERODIMER THE STABILITY OF PER MONOMER AND IN THE FORMATION OF HETERODIMER THE STABILITY OF PER MONOMER AND IN THE FORMATION OF HETERODIMER THE STABILITY OF PER MONOMER AND IN THE FORMATION OF HETERODIMER THE STABILITY OF THE STABILITY OF THE STABILITY OF THE STABILITY OF THE STABILITY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        catalyzing the formation of riboflavin from 5-amino-6-(1'-D)-ribityl-amino-2,4(1H,3H)-pyrimidinedione and L-3,4-dihydrohy-2-butanone-4-phosphate via 6,7-dimethyl-8-lumazine. The beta subunit catalyzes the condensation of 5-amino-6-(1'-D)-ribityl-amino-2,4(1H,3H)-pyrimidinedione with L-3,4-dihydrohy-2-butanone-4-phosphate yielding 6,7-dimethyl-8-lumazine (By similarity). CATALYTIC ACTIVITY: 2 6,7-dimethyl-8-(1-D-ribityl)lumazine = riboflavin + 4-(1-D-ribitylamino)-5-amino-2,6-dihydroxypyrimidine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               s SWISS-PROT entry is copyright. CATALYTIC ACTIVITY: D-ribulose 1,5-bisphosphate + O(2)
3-phospho-D-glycerate + 2-phosphoglycolate.
SUBUNIT: 8 LARGE CHAINS + 8 SMALL CHAINS.
SUBCELLULAR LOCATION: Chloroplast.
SIMILARITY: BELONGS TO THE RUBISCO SMALL CHAIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ACTIVE SITE.

"CDNA sequences for transcripts of the ribulose-1,5-bisphosphate carboxylase/oxygenase small subunit gene family of Mesembryanthemum crystallinum.";
Plant physiol. 95:976-978(1991).
-!- FUNCTION: RUBISCO CATALYZES TWO REACTIONS: THE CARBOXYLATION OF D-RIBULOSE 1,5-BISPHOSPHATE, THE PRIMARY EVENT IN PHOTOSYNTHETIC CARBON DIOXIDE FIXATION, AS WELL AS THE OXIDATIVE FRAGMENTATION OF THE PENTOSE SUBSTRATE IN THE PHOTORESPIRATION PROCESS. BOTH REACTIONS OCCUR SIMULTANEOUSLY AND IN COMPETITION AT THE SAME ACTIVE SITE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         [2]
